

ADEOLU ISRAEL MESOGBORIWON

AI Data Annotation Specialist | AI Content & Quality Evaluator

Lagos, Nigeria | +234 703 717 6627 | Email | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Detail-oriented AI Annotation and Content Evaluation specialist with hands-on experience labeling, categorizing, and validating data for machine learning model training and evaluation. Strong critical thinking and written communication skills, with a proven ability to apply detailed guidelines consistently across large datasets. Background spans data annotation, exploratory data analysis, and quality assurance using Python, SQL, and Excel, complemented by three-plus years in production quality control where uniform application of standards and meticulous documentation were daily requirements. Comfortable working independently, adapting quickly to evolving guidelines, and flagging ambiguous or edge cases for review. Seeking remote opportunities in AI Annotation, Data Labeling, Content Evaluation, and Generative AI training data support.

CORE COMPETENCIES

- Data Annotation & Labeling • AI Content & Output Evaluation • Quality Assurance & Consistency at Scale • Guideline Interpretation & Adherence
- Data Categorization & Validation • Critical Thinking & Edge-Case Resolution • Attention to Detail • Documentation & SOP Adherence

TECHNICAL SKILLS

Data Annotation & AI Operations: Data Labeling, Content Categorization, Dataset Validation, Quality Assessment, Prompt/Response Evaluation, Annotation Tools (Labelbox, CVAT, Amazon SageMaker Ground Truth — working familiarity, fast learner on new platforms)

Data Analysis: Python, Pandas, NumPy, SQL, Excel, Power BI

Machine Learning Fundamentals: Model output evaluation, performance metrics, exploratory data analysis, understanding of how annotation quality impacts model training

Tools: Git, GitHub, Jupyter Notebook, Microsoft Office Suite, Jira/Slack-style collaboration tools

PROFESSIONAL EXPERIENCE

Data Science & AI Intern

June 2024 – November 2024

TedPrime Hub (FGN-NITDA 3MTT Program)

- **Evaluated machine learning outputs** against established performance metrics, identifying inconsistencies and quality gaps in model results — directly comparable to rating AI-generated content for accuracy and compliance.
- **Reviewed and labeled large datasets** to identify patterns, anomalies, and data quality issues, applying consistent categorization criteria across thousands of records.
- **Performed data cleaning, validation, and preprocessing** to improve dataset integrity before model training and evaluation.
- **Documented findings and edge cases** for stakeholders, translating technical observations into clear written communication.
- **Collaborated with team members** to maintain accuracy and consistency of analytical outputs across a shared annotation/analysis workflow.

Data Analyst Intern

August 2023 – January 2024

Welup Digital Academy

- **Processed and validated datasets** to ensure accuracy and completeness, applying structured review criteria consistent with annotation QA workflows.
- **Categorized and analyzed customer and sales data** for reporting, building familiarity with rule-based data labeling and classification.
- **Maintained data quality standards** throughout analysis workflows, including cross-checking outputs for consistency.
- **Built Power BI dashboards** to track performance indicators and communicate findings to stakeholders.

Production Supervisor

2021 – Present

Industrial Projects International Nig. Ltd.

- **Applied quality control standards uniformly** across manufacturing operations and production records — the same discipline required to apply annotation guidelines consistently across large datasets.
- **Verified records and operational documentation** for accuracy, identifying deviations and flagging them for correction, parallel to identifying inconsistencies in labeled or AI-generated content.
- **Monitored key performance indicators** and proactively identified process deviations before they affected output quality.
- **Led teams in executing standardized processes** with high attention to detail, ensuring compliance with documented procedures and guidelines.
- **Prepared structured reports** supporting management decision-making, reinforcing strong written communication under time constraints.

DATA ANALYSIS PROJECTS

Customer Churn Prediction | github.com/adeolumesogboriwon1-ux/churn-prediction

- **Analyzed 7,043 customer records across 33 features** to identify churn patterns, building and evaluating a Random Forest model that reached 78.78% accuracy.
- **Identified contract type and tenure as the strongest churn predictors**, translating model output into a clear, actionable business recommendation.

Credit Card Fraud Detection | github.com/adeolumesogboriwon1-ux/fraud-detection

- **Evaluated 284,807 transactions with severe class imbalance (0.173% fraud)**, applying SMOTE and a Random Forest model to flag fraudulent activity with 86% recall and 89% precision.
- **Reviewed model errors case-by-case**, missing only 14 of 98 fraud cases in testing — the kind of close-read accuracy and false-negative scrutiny required when validating AI-flagged content.

Hospital Readmission Prediction | github.com/adeolumesogboriwon1-ux/healthcare_readmission

- **Processed and labeled 100,244 diabetic patient records** to predict early readmission, achieving 89% model accuracy on an 11.22% positive class rate.
- **Surfaced and documented key risk patterns** (age group, length of stay) for stakeholder reporting, demonstrating consistent rule application across a large, imbalanced dataset.

EDUCATION

Data Science Training (3MTT Program)

TedPrime Hub

Bachelor of Engineering — Chemical Engineering

Federal University of Petroleum Resources, Effurun

Relevant Coursework: Statistics, Probability, Technical Writing, Data Analysis, Engineering Mathematics

CERTIFICATIONS

- 3MTT Data Science Program
- Python for Everybody — University of Michigan
- IBM Data Science Foundations (In Progress)
- Google Data Analytics Professional Certificate (In Progress)

ADDITIONAL INFORMATION

- Strong written and verbal English communication skills, comfortable with structured guidelines and evolving instructions
- Experienced reviewing, evaluating, and categorizing information under defined quality standards
- Reliable home workspace and internet connection for fully remote work
- Open to remote AI Annotation, AI Quality Analyst, AI Content Analyst, Data Annotation, and Generative AI training/evaluation roles
