PROFESSIONAL SUMMARY

Results-driven Automation Engineer with hands-on expertise in PLC programming (Siemens S7, Allen-Bradley), HMI/SCADA development, and industrial control systems within manufacturing and oil & gas environments. Diploma-qualified in Mechatronics Engineering, underpinned by a B.Eng. in Chemical Engineering and NPDC industrial training. Proven track record of reducing equipment downtime by **65%** and increasing production output by **120%** through strategic automation implementation and data-driven process control. Committed to continuous improvement, HSE compliance, and digital transformation—directly aligned with FrieslandCampina's operational excellence goals.

CORE COMPETENCIES

• PLC Programming: Siemens S7, Allen-Bradley, Ladder Logic, FBD	• HMI/SCADA: WinCC, Simatic Manager, TIA Portal	• DCS Systems & Control Room Operations
• Industrial Protocols: Modbus, Profibus, Ethernet/IP	• Motor & Drive Systems: VFD, Star-Delta, ATS, Soft Starters	• Electro-Pneumatic & Hydraulic Systems
• Instrumentation: Sensors, Flow Meters, Transmitters	• Preventive & Corrective Maintenance / KPI Tracking	• HSE Compliance: HSE L1-2-3, HAZOP, Safety Interlocks
• Software: AutoCAD (Mechanical & Electrical), MS Office	• Automation Project Implementation & Commissioning	• Stakeholder & Cross-functional Team Collaboration

PROFESSIONAL EXPERIENCE

Industrial Automation Technician

Institute of Industrial Technology, Lagos

August 2025 – March 2026

- Designed and implemented PLC-based tank level control systems with HMI interface, eliminating overflow/dry-run faults through precise sensor integration and control logic programming.
- Automated conveyor-based sorting systems using proximity sensors and PLC logic, increasing sorting efficiency by **40%** and significantly reducing manual intervention.
- Designed and troubleshoot Star-Delta motor starter circuits using ON-delay timers and contactors, reducing starting inrush current by **30%** and protecting electrical infrastructure.
- Implemented VFD-based variable speed motor control, enhancing energy efficiency by **25%** across diverse production requirements.
- Executed Automatic Transfer Switch (ATS) configuration for seamless grid-to-generator switching with zero-downtime power continuity.
- Developed electro-pneumatic and hydraulic control circuits using solenoid valves, DCVs, FCVs, and actuators for precise linear and rotary motion control.
- Configured WinCC HMI/SCADA for real-time process visualisation with alarm management and historical data logging, improving monitoring efficiency by **45%**.

Production Supervisor

Industrial Projects International Ltd, Abeokuta

July 2023 – November 2024

- Reduced equipment downtime by **65%** through structured preventive maintenance protocols and response strategies, saving approximately **₦2.5M** monthly in lost production costs.
- Improved plant production output by **120%** via real-time process monitoring, control optimisation, and data-driven decision-making.
- Collaborated with maintenance teams to troubleshoot motors, VFD drives, conveyor systems, and process equipment, achieving a **95% first-time fix rate**.
- Managed a cross-functional team of 30 operators and technicians, delivering training on equipment operation, safety procedures, and process controls.
- Maintained zero lost-time accidents record while consistently meeting production targets and HSE compliance standards.

Production Intern

Nigerian Petroleum Development Company (NPDC), OML 111, Benin City

July 2018 – December 2018

- Monitored daily production activities via DCS-based control systems, ensuring optimal process stability and plant performance.
- Participated in HAZOP studies, permit-to-work systems, hazard identification, and HSE compliance checks.
- Gained hands-on exposure to DCS control room operations and SCADA monitoring in an oil and gas environment.
- Maintained accurate production logs and operational records in compliance with regulatory requirements.

KEY TECHNICAL PROJECTS

PLC-Based Automated Tank Level Control System

Integrated level sensors, PLC programming, and HMI with fail-safe logic preventing overflow/dry-run conditions ensuring continuous operation.

Smart Conveyor Sorting System

Automated sorting with proximity sensors, pneumatic actuators, and PLC logic; reduced sorting time by 40% with improved material detection accuracy.

Industrial HMI/SCADA Visualisation System

Configured WinCC-based SCADA for real-time monitoring, alarm management, trending, and historical data logging capabilities.

EDUCATION & CERTIFICATIONS

Diploma in Mechatronics Engineering

Institute of Industrial Technology, Lagos

March 2026

B.Eng. Chemical Engineering

*Federal University of Petroleum Resources,
Effurun-Warri*

November 2019

Certifications

- HSE Level 1, 2 & 3 – Health, Safety & Environment
- Health, Safety & Basic First Aid Certification
- Data Analysis Certification
