Adeolu Mesogboriwon

Data & Business Analyst | Process & Industrial Automation Engineer
| Python | Power BI | Open to Work
Lagos Mainland, Lagos State, Nigeria

Summary

A Process Engineer with 3 years+ of professional experience as a Production Supervisor (with 2 years as Night Shift Supervisor) in detergent manufacturing, where I specialized in process optimization, project coordination, and people management. My career journey has consistently been driven by a passion for innovation, technology, and problem-solving. This has inspired me to begin my current training in Mechatronics Engineering at the Institute for Industrial Technology (IIT), Lagos—an interdisciplinary program combining mechanical, electrical, control, and computer engineering. Through this program, I am developing future-ready skills in: Automation & Robotics Control Systems & Instrumentation Industrial Maintenance & Smart Manufacturing Applied Engineering Problem-Solving. My goal is to leverage my background in chemical engineering and new expertise in mechatronics to pursue global opportunities in industrial automation, manufacturing innovation, and advanced engineering solutions. I am particularly interested in roles, collaborations, and scholarships that focus on: Sustainable industrial growth Smart and automated manufacturing Engineering solutions for real-world challenges. I believe in continuous learning, cross-disciplinary collaboration, and building solutions that create lasting impact. I'm always open to connecting with professionals, mentors, and organizations in engineering, automation, mechatronics, and industrial technology—locally and internationally.

Experience

Independent Projects

Business Data Analyst

June 2026 - Present (1 month)

Lagos Mainland

Built 5 end-to-end data analysis projects using Python, Power BI and machine learning:

- Customer Churn Prediction — 78.78% accuracy (7K records)
- Sales Performance Dashboard — Power BI, \$2.26M revenue
- Credit Card Fraud Detection — 86% recall (284K records)
- Job Market Salary Analysis — 9,355 jobs analyzed
- Healthcare Readmission Prediction — 89% accuracy (100K records)

Tools: Python, pandas, scikit-learn, Power BI, Jupyter, GitHub

Portfolio: github.com/adeolumesogboriwon1-ux

Institute of Industrial Technology (IIT)

Industrial Automation Intern

August 2025 - March 2026 (8 months)

Lagos

- Designed and implemented HMI and PLC-based tank level control systems within a 1-week project timeline, achieved automated pump operation and eliminated overflow/dry-run conditions.
- Automated and conveyor-based sorting systems using proximity sensors and PLC logic, increased sorting efficiency and reduced manual intervention during project execution.
- Designed, implemented and Troubleshoot Star-Delta electric motor starter control and power circuit using a ON-Delay timer device and Contactors, which reduced starting or In-rush current by 30%.
- Implemented variable speed control of electric motors using VFD drive, which enhanced energy efficiency and operational flexibility.
- Designed and executed an Automatic Transfer Switch (ATS) configuration for seamless power switching between grid and generator systems using relays, ensuring uninterrupted power supply.

Electro-Pneumatics & Hydraulics Systems

- Designed and implemented Electro-pneumatics and hydraulic systems control circuits using solenoid valves, directional control valves (DCV), proximity sensors, flow control valves (FCV), actuators, etc, to achieved precise control of linear and rotary motion systems.
- Implemented a sensor-based material detection switching system using PLC control logic, DCV, FCV, solenoid valve, 3/2- way valve, which reduced manual operation.
- Configured and monitored Human Machine Interface (HMI)/SCADA systems using WinCC software for real-time visualizations of Industrial processes, which improved system monitoring and operators interaction.

TedPrime Hub

Data Analyst Intern

June 2024 - November 2024 (6 months)

Abeokuta South

- Collected, cleaned, and analyzed datasets to identify operational trends and inefficiencies.
- Built data models that improved reporting efficiency by approximately 25% and enabled faster interpretation of operational data.

COVID-19 Data Analysis and Visualization

- Performed comprehensive EDA on global COVID-19 datasets.
- Analyzed country trends, recovery rates, and case predictions.
- Built a classification model to predict country trends, recovery rates using Covid-19 datasets.
- Conducted feature engineering and model evaluation (accuracy, precision, recall).
- Built interactive visualizations and summary reports.
- Tools: Python, Pandas, Matplotlib, Scikit-learn

Industrial Projects International (Nig.) Limited (IPI SOAPS)

Processing Supervisor / Shift In Charge

April 2022 - November 2024 (2 years 8 months)

Abeokuta North

Formulated and carried-out the materials balances of the raw materials for the production of 45,000 tonnes of dry detergent in 24hours and also minimized wastage to 7%.

Boosted production capacity by 120% by implemented one-man machine inspectors, implemented clean work environment policy, put in place fast and efficient response systems to machine failure to ensure proper manning of the machine which in turn reduced downtimes to 14% and workplace accident to 0.05%.

Ensured that the packaging and raw materials are always available together with the provisions of utilities support during shift operation which brought about improvement in quality of the finished product to 99.9%.

Ensured that the packaging machine and production machines are in good shape, and led team of 85 people to make sure the finished goods transfer (FGT) are provided 34minutrs before time.

Industrial Projects International (Nig.) Limited

Graduate Engineering Trainee

March 2020 - October 2021 (1 year 8 months)

Abeokuta North

Performed routine inspections of incoming raw materials to check quality and specifications which results into 99.6% purity of detergents powder products. Using people skills, we were able to reduce obstacles and variables to the nearest minimum which led to 98% improvement in production efficiency, meet deadline and deliver 130% improvement in productivity.

Nigerian Petroleum Development Company

Process Engineering Intern

August 2018 - November 2018 (4 months)

Benin City

- Assisted in monitoring daily production activities and process parameters to ensure optimal plant performance.
- Supported maintenance activities, including equipment inspections and shutdown preparation.
- Participated in safety procedures, including permit-to-work systems, hazard identification, and compliance checks.
- Participated in safety procedures, including permit-to-work systems, hazard identification, and compliance checks.
- Maintained accurate production logs, reports, and operational records.
- Assisted in oil and water sample analysis in line with laboratory procedures.
- Observed and supported gas testing and isolation procedures under supervised operations on.
- Collaborated with supervisors and technicians to ensure smooth plant operations.
- Gained exposure to DCS-based process systems and control room.

Education

Federal University of Petroleum Resources, Effurun

Bachelor of Engineering, Chemical Engineering · (January 2015 - November 2019)

Adeyemi Federal University of Education (Formerly Adeyemi College of Education)

National Certificate in Education, Physics and Mathematics

Combination · (January 2011 - December 2014)

African Leadership, Inc.

ALX Pathway Program, Organizational Leadership · (October 2024 - May 2025)

TedPrime Hub, Abeokuta

Data Science, Data Processing · (June 2024 - November 2024)

Institute of Industrial Technology (IIT)

Diploma Certification, Mechatronics, Robotics, and Automation
Engineering · (November 2024 - March 2026)
